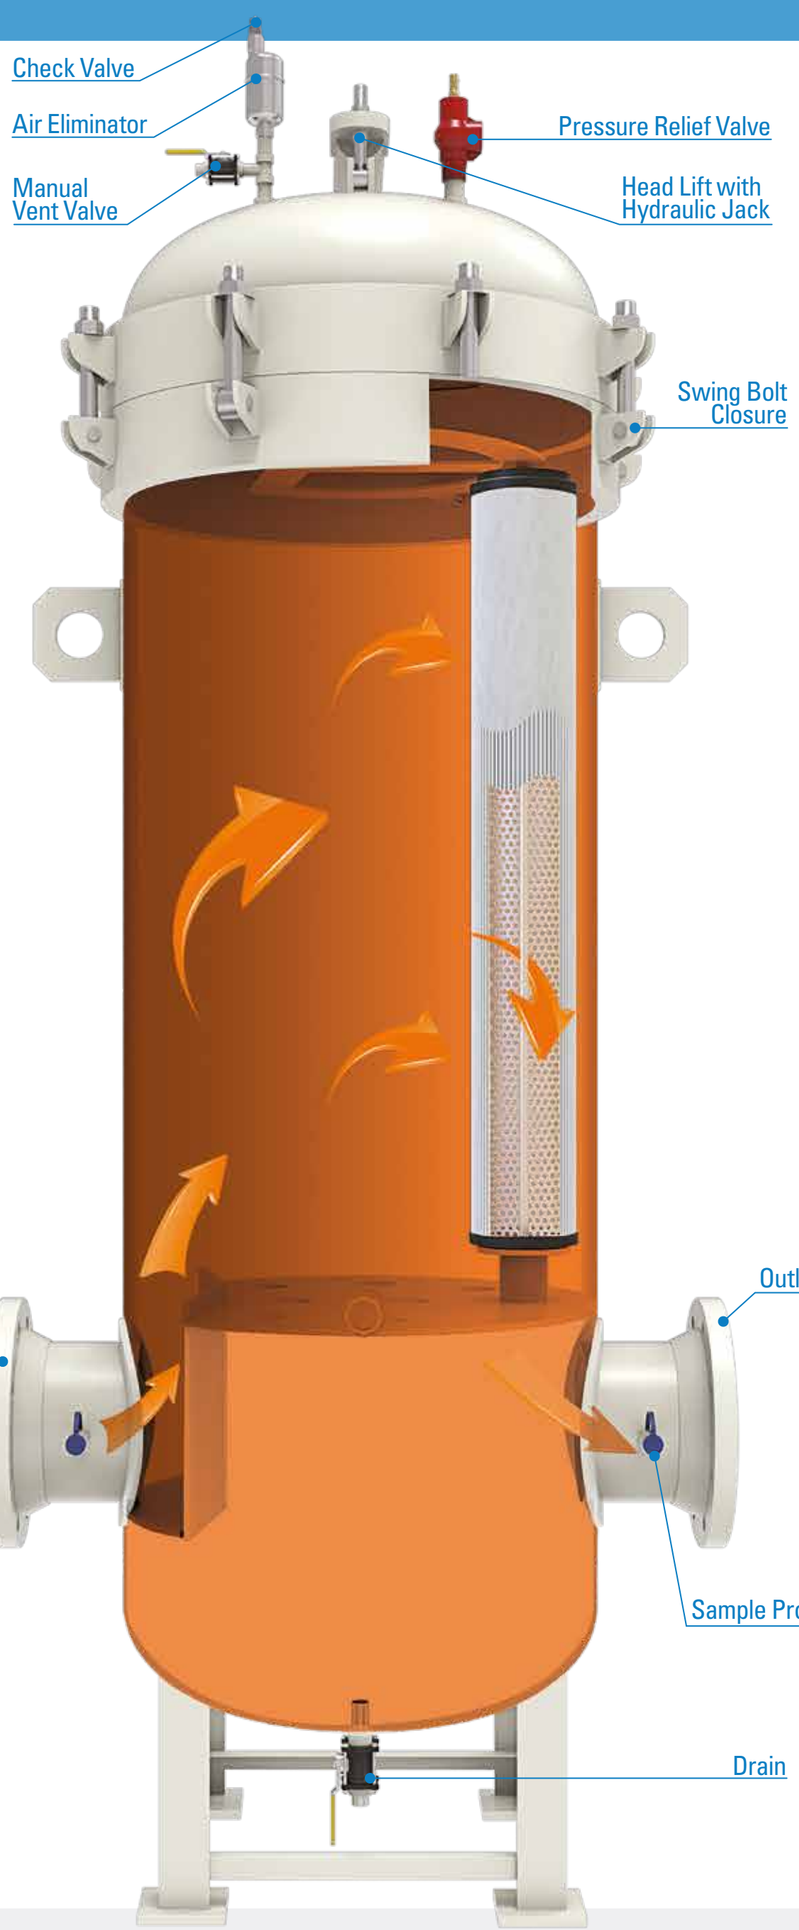
M Series

MICROFILTER HOUSINGS



Facet FA-CIF Series
Crushable Incinerable Cartridges & Center Tube Kit
(optional)

Facet Microfilter Cartridges

Facet Microfilter housings are specifically designed to remove solid particles such as rust, dirt, pipe scale, sand, and metal from aviation fuel.

They are commonly located ahead of clay treaters and filter/water separators to protect and prolong cartridge life. A single pass through the filter allows clean product to flow downstream.

Facet M Series Microfilter housings will continuously remove solids from fuel when used with Facet filter cartridges.
