## TABLE OF CONTENTS

### Section 1 - Coalescer Separators

Coalescer Separators - General Description  
Vertical Coalescer Separators  
    El 1581, 7th Edition, Category C, Type S  
    El 1581, 7th Edition, Category M, Type S  
Horizontal Coalescer Separators  
    El 1581, 7th Edition, Category C, Type S  
    El 1581, 7th Edition, Category M, Type S  
CA Series - Coalescer Cartridges  
CAA Series 5 - Coalescer Cartridges  
CB, CC, CR Series - Coalescer Cartridges  
CM Series - Coalescer Cartridges  
CM100 Series - Coalescer Cartridges  
EB Series - Coalescer Cartridges  
SS Series - Synthetic Separator Cartridges  
SS Series 5 - Synthetic Separator Cartridges  
ST Series - Teflon® Separator Cartridges  
ST Series 5 - Teflon® Separator Cartridges

### Section 2 - Filters

M Series - Filter Housings  
M Series - High Efficiency Pleated Paper Filter Cartridges  
MG Series - Glass Fiber Filter Cartridges  
BS Series - Basket Strainers

### Section 3 - All Purpose Filter Housings

Fuel-Gard® VF-21SB/22SB Housing with Coalescer Separator Cartridges  
21 Series Cartridges  
22 Series Cartridges

### Section 4 - Oil Water Separators

Bilge Water Separators with Ceramic Membrane  
    CPS 3.2E + EMB  
    CPS 3.2E + EMB for Submarines  
    CPS-10B MKIII + EMB  
Bilge Water Separators with Disposal Membrane  
    CPS 3.2E + EBM 14x1  
    CPS B MKIII + EBM 14x  
Oil Water Separators for Offshore Applications - MAS Series

### Section 5 - Systems

Portable Fuel Filtration and Pumping Unit for Helicopters and Light Aircrafts  
Lube Oil Conditioners - V Series  
JP-5 Fuel Treatment Systems  
Turbo-Generator Fuel/Oil Modules

### Section 6 - Sewage Water Treatment Systems

STP Series - Sewage Treatment Plants  
VTP Series - Sewage Treatment Plants with Built-in Vacuum System

## Coalescer Separators General Description

Vertical Two-Stage Coalescer Separator Flow Diagram

Two-stage coalescer separators are the primary defense against fuel contamination by water and dirt. The coalescer separator housings contain both first-stage coalescer and second-stage separator cartridges with no internal moving parts. The product is pumped under pressure to flow through the housing inlet chamber and inside/out through the multi-media coalescer cartridge. This specially developed multi-media cartridge configuration traps and holds minute solid particles to less than one micron, while forcing small water droplets to commingle and grow into heavier, larger drops that fall by gravity to the housing sump area. The cleaned fuel continues to flow outside/in through the second-stage separator cartridges. These separator cartridges strip any remaining water droplets from the fuel allowing only clean, dry fuel to pass.

Typical Horizontal End Opening Coalescer Separator Flow Diagram for Fixed Installation

Facet two-stage coalescer separators will continuously remove solids and water contaminants from aviation fuels. Vertical and horizontal housing designs are available with a wide selection of coalescer and separator cartridges to meet specific applications. Housings are designed for easy servicing and low maintenance. All are built to EI 1596 with many standard and optional accessories and connections available to facilitate piping and installation requirements. Facet coalescer separators provide a complete system that meets industry standards and individual levels of effluent purity required by commercial airlines, major oil companies and governments, worldwide.

---

VCS Series  
Vertical Coalescer Separators for  
EI 1581, 7th Edition, Category C, Type S

Category C Coalescer Separator housings are for commercial aviation fuel. Type S qualifications can be used at all filtration points in an aviation fueling system. Type S is meant to be used at filtration points where significant levels of water and dirt in the product can be expected. Facet VCS Series Vertical Coalescer Separator housings fully comply with EI 1581, Category C, Type S requirements.

### Reliable Performance

Facet coalescer separators are a result of 80 years of continuous research and development to meet the ever demanding performance requirements in the aviation fuel handling industry. This, along with proven field performance, demonstrates Facet's ability to provide quality products that meet current specifications as well as specific customer requirements for installations in refineries, bulk storage terminals, heliports, airports, etc.

### Standard Housing Design

- EI 1596 Design & Construction
- Welded carbon steel construction—other materials available on request
- ASME Code, Section VIII construction, stamped and certified
- Design pressure: 150 psi @ 250°F—other design pressures available on request
- Inlet, outlet and drain connections permanently marked
- Choice of rod or screw base coalescer cartridge mounting styles
- Interior: Epoxy coated (EI 1541)
- Exterior: Prime coated
- Swing bolt head closures
- Buna-N o-ring closure seal
- Knife edge cartridge mounting seals
- Headlift furnished on 18" (457 mm) OD and larger
- Spider plate attached to vessel wall
- Sloping cartridge plate to drain connection
- 4" inlet/outlet cleanout/inspection connections (when permitted by design)
- Connections provided for options listed below

### Options

- Automatic air eliminator with check valve\*
- Pressure relief valve\*
- Differential pressure gauge\*
- Pilot control valve
- Pilot tester
- Water slug control valve
- Electrical water-level alarm
- Water drain valves
- Liquid level gauge
- Blind cover for pilot control mounting flange
- Immersion heaters
- Sampling probes
- Working platform and ladder

(\* Mandatory for 7th Edition)

# VCS Series

### REFERENCE NOTES:

(1) Model numbers include housing and required cartridges.

(2) Dimensions are approximate and should not be used for installation purposes.

### NOTES:

a. All elements are mounted against knife edge seals.

b. Nameplate to be stamped with EI classified data.

c. Inlet chamber to be hydrostatic tested at 115 psi.

d. Coalescer cartridges are offered with a choice of rod or screw base mounting.

The suffix "SB" will be added to the coalescer model number when screw base is required. Example: CAA28-5 = Rod Mount / CAA28-5SB = Screw Base

VCS Series  
Vertical Coalescer Separators for  
EI 1581, 7th Edition, Category M, Type S

Category M Coalescer Separator housings are for Military JP-8 or JP-5 fuel. Type S qualifications can be used at all filtration points in an aviation fueling system. Type S is meant to be used at filtration points where significant levels of water and dirt in the product can be expected. Facet VCS Series Vertical Coalescer Separator housings fully comply with EI 1581, Category M, Type S requirements.

### Reliable Performance

Facet coalescer separators are a result of 80 years of continuous research and development to meet the ever demanding performance requirements in the aviation fuel handling industry. This, along with proven field performance, demonstrates Facet's ability to provide quality products that meet current specifications as well as specific customer requirements for installations in refineries, bulk storage terminals, heliports, airports, etc.

### REFERENCE NOTES:

- (1) Model numbers include housing style and required cartridge mounting.  
 (2) Dimensions are approximate and should not be used for installation purposes.

### NOTES:

- a. All elements are mounted against knife edge seals.  
 b. Nameplate to be stamped with EI classified data.  
 c. Inlet chamber to be hydrostatic tested at 115 psi (793 kPa).  
 d. Coalescer cartridges are offered with a choice of rod or screw base mounting. The suffix "SB" will be added to the coalescer model number when screw base is required.  
 Example: CAA33-5 = Rod Mount / CAA33-5SB = Screw Base

### Horizontal Coalescer Separators for Fixed Installations EI 1581, 7th Edition, Category M, Type S

Category M Coalescer Separator housings are for Military JP-8 or JP-5 fuel. Type S qualifications can be used at all filtration points in an aviation fueling system. Type S is meant to be used at filtration points where significant levels of water and dirt in the product can be expected. Facet HCS Series Horizontal Coalescer Separator housings fully comply with EI 1581, Category M, Type S requirements.

#### Reliable Performance

Facet coalescer separators are a result of 80 years of continuous research and development to meet the ever demanding performance requirements in the aviation fuel handling industry. This, along with proven field performance, demonstrates Facet's ability to provide quality products that meet current specifications as well as specific customer requirements for installations in refineries, bulk storage, terminals, heliports, airports, etc.

#### Standard Housing Design

- EI 1596 Design & Construction
- Welded carbon steel construction—other materials available on request
- ASME Code, Section VIII construction, stamped and certified
- Design pressure: 150 psi @ 250°F—other design pressures available on request
- Inlet, outlet and drain connections permanently marked
- Interior: Epoxy coated (EI 1541)
- Exterior: Prime coated
- Swing bolt head closures
- Hinged end opening cover
- Flanged inlet and outlet connections
- Buna-N o-ring closure seal
- Choice of rod or screw base coalescer cartridge mounting styles
- 4" inlet/outlet cleanout/inspection connections (when permitted by design)
- Knife edge cartridge mounting seals
- Spider plate attached to vessel wall

#### Options

- Automatic air eliminator with check valve\*
- Pressure relief valve\*
- Differential pressure gauge\*
- Pilot control valve
- Pilot tester
- Water slug control valve
- Electrical water-level alarm
- Water drain valves
- Liquid level gauge
- Blind cover for pilot control mounting flange
- Immersion heaters
- Sampling probes

(\* Mandatory for 7th Edition)

# HCS Series (End Opening)

### REFERENCE NOTES:

- (1) Model numbers include housing style and required cartridge mounting.  
 (2) Dimensions are approximate and should not be used for installation purposes.

### NOTES:

- a. All elements are mounted against knife edge seals.  
 b. Nameplate to be stamped with EI classified data.  
 c. Inlet chamber to be hydrostatic tested at 115 psi (793 kPa).  
 d. Coalescer cartridges are offered with a choice of rod or screw base mounting. The suffix "SB" will be added to the coalescer model number when screw base is required. Example: CM-33-5 = Rod Mount / CM-33SB-5 = Screw Base

## CA Series Coalescer Cartridges

### For Maximum Water Coalescing Efficiency and Solids Holding Capacity

Facet CA Series coalescer cartridges offer the finest performance available. This standard line of high flow coalescer cartridges removes ultra-fine solids and enhances separation of water from jet fuel.

Built for balanced fluid flow-thru and structural strength, each CA Series coalescer cartridge is a single-piece construction of various combined media, precisely arranged in many layers and pleats, wrapped around a treated, perforated metal shell —all encased in an outer sock material. All cartridges are 6" (152 mm) outside diameter, the standard model has an inside diameter of 3½" (89 mm) and available in standard interchangeable nominal lengths from 11¼" (290 mm) to 57¼" (1450 mm).

The CA Series coalescer cartridges are available in two cartridge mounting styles: self-centering rod mount and screw base. The rod mount style has treated metal end caps, while the screw base ends are injection molded, glass-filled nylon. This screw base material offers superior strength and ease of maintenance —uniform threads, no shrinkage, no galling and no gasket to recover.

A permanent affixed Buna-N gasket seals against the V-type knife edge mounting adaptor to provide a positive seal. It will not separate from the cartridge during installation or change out.

### Standard Design Features

- Multi-layered media for increased solids holding capacity
- Ultra-fine solids removal
- Maximum water coalescence
- Balanced cartridge flow characteristics
- Recommended maximum operating temperature: 240°F (115°C)
- Withstand in excess of 75 psi differential pressure
- pH range from 5 to 9
- Screw base or open-end configuration

### Materials

- All metal components are treated against corrosion
- Screw base ends are injection molded, glass-filled nylon with locked-in gaskets
- Buna-N gaskets —other materials are available on request

## CAA Series 5 Coalescer Cartridges Qualified to EI 1581, 7<sup>th</sup> Edition, Category C

### For Maximum Water Coalescing Efficiency and Solids Holding Capacity

Facet CAA Series 6 coalescer cartridges offer the finest performance available. This standard line of high flow coalescer cartridges removes ultra-fine solids and enhances separation of water from jet fuel.

The Facet coalescer separator housings equipped with CAA Series 6 coalescer and companion separator cartridges have been tested and fully qualified to meet the performance requirements to EI 1581, Sixth Edition, Category C (Category C replaces the previous class A, B, and C of API 1581 3<sup>rd</sup> Edition.)

Built for balanced fluid flow-thru and structural strength, each CAA Series 6 coalescer cartridge is a single-piece construction of various combined media, precisely arranged in many layers and pleats, wrapped around a coated, perforated metal center tube—all encased in an outer sock material. All are 6" OD (152 mm) by 3½" ID (89 mm) and available in standard interchangeable nominal lengths from 11¼" (290 mm) to 57¼" (1450 mm).

The CAA Series 6 coalescer cartridges are available in two cartridge mounting styles: self-centering rod mount and screw base. The rod mount style has treated metal end caps, while the screw base ends are injection molded, glass-filled nylon. This screw base material offers superior strength and ease of maintenance—uniform threads, no shrinkage, no galling and no gasket to recover.

A permanently affixed Buna-N gasket seals against the V-type knife edge mounting adaptor to provide a positive seal. It will not separate from the cartridge during installation or change out.

### Standard Design Features

- Qualified to the Sixth Edition of EI 1581, Category C
- Multi-layered media for increased solids holding capacity
- Ultra-fine solids removal
- Maximum water coalescence
- Balanced cartridge flow characteristics
- Recommended maximum operating temperature: 240°F (115°C)
- Withstand in excess of 75 psi differential pressure
- pH range from 5 to 9
- Screw base or open-end configuration

### Materials

- All metal components are treated against corrosion
- Screw base ends are injection molded, glass-filled nylon with locked-in gaskets
- Buna-N gaskets —other materials are available on request

## CB, CC, CR Series Coalescer Cartridges

### Description

Facet coalescer cartridges provide efficient and economical filtration and coalescence of fluids in a wide range of applications where EI certification is not required. This broad range of liquid/liquid coalescers provides greater coalescing efficiency and contaminant holding capacity than most conventional coalescers or other separation techniques. As a result, Facet coalescers improve product quality, reduce maintenance costs and help prevent unscheduled shutdowns.

Facet coalescer cartridges are manufactured using proprietary combinations of high performance filter media. Years of research and development in phase separation technology has enabled Facet to develop a very broad range of filter grades to meet the stringent requirements of industrial applications.

Facet coalescer cartridges are available in numerous configurations to replace most conventional coalescing cartridges. In addition, Facet can develop special configurations to meet specific applications requirements.

### Benefits

- High Performance filter media provides effective particle removal and coalescence in a wide range of applications
- Proprietary design provides superior performance when compared to conventional coalescing cartridges
- Continuous lengths minimize process downtime, reduce cartridge change-out costs and eliminate filter bypass concerns
- Retention ratings available from 1 to 40 microns
- 90-95% nominal efficiency solids removal ratings. Water removal is 15 ppm
- Electro-tin plated components help prevent rust and corrosion. Coated components are available as standard options
- 75 psid burst strength permits use in demanding applications

## CM Series 5 Coalescer Cartridges Qualified to EI 1581 7th Edition, Category M

### For Maximum Water Coalescing Efficiency and Solids Holding Capacity

Facet CM Series 5 coalescer cartridges offer the finest performance available. This line of high flow coalescer cartridges removes ultra-fine solids and enhances separation of water from jet fuel.

The Facet coalescer separator housings equipped with CM Series 5 coalescer and companion separator cartridges have been tested and fully qualified to EI 1581, 7<sup>th</sup> Edition, for category "M", in both vertical and horizontal orientations.

Built for balanced fluid flow-thru and structural strength, each CM Series 5 coalescer cartridge is a single piece construction of various combined media, precisely arranged in many layers and pleats, wrapped around a coated, perforated metal center tube- all encased in an outer sock material. All are 6" OD (152 mm) by 3.5" ID (89 mm) and available in standard interchangeable nominal lengths in increments from 11.25" (290 mm) to 57.25" (1450 mm).

The CM Series 5 coalescer cartridges are available in two cartridge mounting styles; self-centering rod mount and screw base. The rod mount style has treated metal end caps, while the screw base ends are injection molded, glass-filled nylon. This screw base material offers superior strength and ease of maintenance- uniform threads, no shrinkage, no galling and no gasket recover.

A permanently affixed Buna gasket seals against the V-type knife edge mounting adaptor to provide a positive seal. It will not separate from the cartridge during installation or change out.

### Standard Design Features

- Qualified to the Sixth Edition of EI 1581 for all category M
- Multi-layered media for increased solids holding capacity
- Ultra-fine solids removal
- Maximum water coalescence
- Balanced cartridge flow characteristics
- Recommended maximum operating temperature: 240°F (115°C)
- Withstands excess of 75 psi differential pressure
- pH range from 5 to 9
- Choice of self-centering rod or screw base coalescer cartridge mounting styles

### Materials

- All metal components are treated against corrosion
- Screw base ends are injection molded, glass-filled nylon with locked-in gaskets
- Buna-N gaskets —other materials are available on request

## CM100 Series Coalescer Cartridges

Qualified to EI 1581 7th Edition, Category M100

### For Maximum Water Coalescing Efficiency and Solids Holding Capacity

Facet CM100 Series coalescer cartridges offer the finest performance available. This line of high flow coalescer cartridges removes ultra-fine solids and enhances separation of water from jet fuel.

The Facet coalescer separator housings equipped with CM100 Series coalescer and companion separator cartridges have been tested and fully qualified to EI 1581, 7<sup>th</sup> Edition, for category "M", in both vertical and horizontal orientations.

Built for balanced fluid flow-thru and structural strength, each CM100 Series coalescer cartridge is a single piece construction of various combined media, precisely arranged in many layers and pleats, wrapped around a coated, perforated metal center tube- all encased in an outer sock material. All are 6" OD (152 mm) by 3.5" ID (89 mm) and available in standard interchangeable nominal lengths in increments from 11.25" (290 mm) to 57.25" (1450 mm).

The CM100 Series 6 coalescer cartridges are available in two cartridge mounting styles; self-centering rod mount and screw base. The rod mount style has treated metal end caps, while the screw base ends are injection molded, glass-filled nylon. This screw base material offers superior strength and ease of maintenance- uniform threads, no shrinkage, no galling and no gasket recover.

A permanently affixed Buna gasket seals against the V-type knife edge mounting adaptor to provide a positive seal. It will not separate from the cartridge during installation or change out.

### Standard Design Features

- Qualified to the Sixth Edition of EI 1581 for all category M
- Multi-layered media for increased solids holding capacity
- Ultra-fine solids removal
- Maximum water coalescence
- Balanced cartridge flow characteristics
- Recommended maximum operating temperature: 240°F (115°C)
- Withstands excess of 75 psi differential pressure
- pH range from 5 to 9
- Choice of self-centering rod or screw base coalescer cartridge mounting styles

### Materials

- All metal components are treated against corrosion
- Screw base ends are injection molded, glass-filled nylon with locked-in gaskets
- Buna-N gaskets —other materials are available on request

## EB Series Coalescer Cartridges

Facet Model EB coalescer cartridges are for removing oil from water. Using a variety of media, these coalescer cartridges use the principle of mechanical impingement and preferential wetting to break any mechanical emulsion of oil and water. Using this force of gravity, the lighter liquid (oil) rises to the top of the vessel where it can be drawn off and the water flows to the bottom of the vessel and out the outlet connection.

### Benefits

- pH range from 5 to 9
- Multi-layered media for solids holding
- Solids removal: 15 micron nominal
- Removes oil down to 5 ppm
- Balanced flow characteristics
- Self-centering rod mount
- Recommended maximum operating temperature: 240°F
- Maximum differential pressure: 75 psi (5.25 kg/cm<sup>2</sup>)
- Flow direction: Inside to out

### Applications

- Bilge & Ballast water
- Ship building and repair yards
- Commercial marine ports

## SS Series Synthetic Separator Cartridges

Facet Model SS synthetic separator cartridges feature a specially developed hydrophobic synthetic media which offers all the permanent features of Teflon® screen, combined with ease of repair and lower cost. Synthetic mesh is wrapped around a treated, perforated metal shell, then adhesive bonded to gasketed metal end caps.

The distinctive Facet center tube design provides balanced flow of product (radially inward) throughout the cartridge. All metal components are treated to resist corrosion.

The synthetic mesh is designed for more effective water repelling characteristics assuring long, troublefree service. Recommended maximum operating temperature is 240°F (115°C). For compatibility in extreme operating conditions, other gasket, adhesive and metal materials are available.

### Standard Design Features

- Superior water repelling characteristics over Teflon® and paper
- More resistant to surfactants
- Cleanable and reusable
- Maximum recommended operating temperature: 240°F (115°C)
- pH range from 5 to 9
- Designed for balanced flow through cartridge
- Flow direction: Outside to in

### Materials

- Synthetic mesh 50 micron
- Treated metal components for corrosion protection
- Buna-N gaskets —other gasket, adhesive and metal materials are available on request

## SS Series 5 Synthetic Separator Cartridges Qualified to EI 1581 7th Edition, Category C

### Standard Design Features

- Cleanable and reusable
- Superior water barrier
- Maximum recommended operating temperature: 240°F (115°C)
- pH range from 5 to 9
- Designed for balanced flow through cartridge
- Flow direction: Outside to in

### Materials

- Synthetic mesh
- Treated metal components for corrosion protection
- Buna-N gaskets — other gasket, adhesive and metal materials are available on request

Facet SS Series 5 synthetic separator cartridges feature a specially developed hydrophobic synthetic media which offers all the permanent features of Teflon® coated metal screen, with the ability to handle higher flow rates. Synthetic mesh is wrapped around a treated, perforated metal shell, then adhesive-bonded to gasketed metal end caps.

The distinctive Facet center tube design provides balanced flow of product (radially inward) throughout the cartridge. All metal components are treated to resist corrosion.

Facet filter water separators equipped with coalescer cartridges Facet CAA Series 5 and separator cartridges Facet SS Series 5 have been tested and fully qualified to meet the performance requirements of EI 1581, 7th Edition.

The synthetic mesh is designed for more effective water repelling characteristics assuring long, troublefree service. Recommended maximum operating temperature is 240°F (115°C). For compatibility in extreme operating conditions, other gasket, adhesive and metal materials are available.

SS Series 5  
Synthetic Separator Cartridges

## ST Series Teflon® Separator Cartridges

### Standard Design Features

- Cleanable and reusable
- Maximum recommended operating temperature: 240°F (115°C)
- pH range from 5 to 9
- Designed for balanced flow through cartridge
- Flow direction: Outside to in

### Materials

- Synthetic mesh 50 micron
- Treated metal components for corrosion protection
- Buna-N gaskets —other gasket, adhesive and metal materials are available on request

Facet manufactures cleanable and reusable separator cartridges of the highest quality in a variety of dimensional configurations. Teflon® coated screen is wrapped around a treated, perforated metal shell, lock seam folded and secured by metal clips, then adhesive bonded to gasketed metal end caps. The distinctive Facet center tube design provides balanced flow of product (radially inward) through the cartridge.

All metal components are treated to resist corrosion. The screen is Teflon® coated for more effective water repelling characteristics assuring long, troublefree service. Recommended maximum operating temperature is 240°F (115°C). For compatibility in extreme operating conditions, other gasket, adhesive and metal materials are available.

## M Series Filter Housings

Facet filter housings are specifically designed to remove solid particles such as rust, dirt, pipe scale, sand and metal from fuel. They are commonly located ahead of clay treaters and coalescer separators to protect and prolong cartridge life. A single pass through the filter allows clean product to flow downstream.

Facet filter housings will continuously remove solids from fuel when used with Facet standard single, double or triple-length FA, M OR CIF Series high efficiency filter cartridges. Housings are designed for easy servicing and low maintenance. All are built to ASME Code, Section VIII, with many standard and optional accessories and connections available to facilitate individual installation requirements. Facet filters provide a complete system to meet industry standards and levels of effluent purity required by commercial airlines, major oil companies and governments, worldwide.

M Series filter housings use any of Facet's high efficiency filter cartridges. A single pass of product through the system removes solids such as rust, dirt, scale, granules and other particles commonly found in liquid process streams.

M Series filter housings are available in three styles and in several standard sizes to accommodate specific flow and filtration requirements. They are designed with no internal moving parts to provide easy service and reduced maintenance costs. Each housing is manufactured using quality materials and workmanship to give long-lasting, dependable service.

M Series filter housings can be fitted with either multiple single-length cartridges, stacked 1, 2 or 3 high or their double-length or triple-length equivalents.

### Standard Housing Design

- EI 1596 Design & Construction
- Body: Welded carbon steel construction other materials available on request
- ASME Code, Section VIII construction, stamped and certified
- Designed for 150 psi @ 250°F—higher pressure and temperature ratings available on request
- Head closures: Style A —thru-bolt; Styles B and C —swing bolt
- Buna-N closure gasket —other materials available on request
- Rod mount cartridge hardware
- Knife edge cartridge mounting seals
- Headlift furnished on 20" (508 mm) and larger
- Inlet and outlet permanently marked
- Exterior: Prime coated
- Interior: Epoxy coated (EI 1541)

### Standard Connections

- Inlet and outlet: Style A —3000# NPT; Style B and C —150# RF (ANSI) flanged
- Side and bottom drain: 3000# NPT
- Vent and relief valve: ¾" 3000# NPT
- Pressure gauge: ¼" 3000# NPT

### Options

- Automatic air eliminator
- Automatic air eliminator check valve
- Differential pressure gauge
- Pressure relief valve
- Manual drain valve

### NOTES:

1. Cartridges are selected separately to fit specific application requirements.
2. Multiple stack cartridges can be replaced with one single-length equivalent. For example: 1M-214 = 1M-128 or 6M-314 = 6M-143, etc.
3. Consult factory for flow rates when using EI 1590 Qualified Elements.

All dimensions, weights and volumes are approximate and are for estimating purposes only.

---

## M Series High Efficiency Pleated Paper Filter Cartridges

Facet M Series high efficiency pleated paper filter cartridges are designed to effectively remove solid contaminants such as rust, dirt, scale, granular and other types of solids. These cartridges are constructed to meet the demanding requirements of the marine filter market.

Media with high efficiencies throughout the life of the cartridges are available in ratings of 0.5 to 75 microns. The filtration of potable liquids is not recommended with this series of filter cartridges.

Facet also offers a MPM Series multimedia, pleated extended area, depth filter cartridge for removing colloidal, slimy, or sludge type solids, as well as extremely fine solids, from process streams. They are available in 0.5, 1, and 2 micron ratings. The combination of multimedia pleated paper fiberglass sheets provides a unique depth filter with a large surface area.

Our pleated paper filter media is made from a variety of natural and synthetic fibers. The fibers are bonded using various resins to provide excellent filtration and solids holding characteristics.

### Benefits

- Higher efficiency and longer service life = lower operating costs
- High efficiency cartridge provides superior solids holding capacity
- New spirally wound core reduces cartridge weight resulting in lower freight costs
- All metal components are epoxy powder coated to protect against corrosion
- Gaskets are Buna-N -other materials available upon request
- Available in both self-centering rod mount and screw base
- Available in numerous micron ratings: 0.5, 1, 2, 5, 10, 15, 25, 40, and 75
- Flow direction: Outside to In
- Design collapse pressure: 75 psid (5.25 kg/cm<sup>2</sup>)
- Initial differential pressure: 2 psi (014 kg/cm<sup>2</sup>) or less

### Applications

- Fuels
- Rolling Oils
- Insulating Oils
- Paints
- Liquid Plastics
- Waxes
- Lube Oils
- Coolants
- Industrial Water
- Varnishes
- Base Oils
- Solvents (Stoddard Based)
- Petroleum Based and Synthetic Hydraulic Fluids

1818	400	0.2	2.0	0.4	2.0
2273	500	0.2	2.0	0.3	2.0

Flow rates are expressed in US Gallons per Minute (GPM).  
GPM x 3.785 = Liters per Minute (LPM)

Differential pressure is listed in Pound per Square Inch (PSI).  
PSI x .07 = Kilograms per Centimeter Squared (kg/cm²).

## MG Series Glass Fiber Filter Cartridges

Facet's Model MG glass fiber depth filter cartridges are for removing colloidal, slimy or sludge type solids 10 micron and larger or where compatibility problems exist with cellulose media.

Our pleated paper filter media is made from a variety of natural and synthetic fibers. The fibers are bonded using various resins to provide excellent filtration and solids holding characteristics.

The cartridges are 6" (152 mm) OD, 3 1/2" (89 mm) ID and 14 1/2" (368 mm) long.

### Standard Design Features

- Maximum recommended operating temperature: 300°F (148°C)
- Maximum differential pressure: 75 psi (5.25 kg/cm<sup>2</sup>)
- Flow direction: Outside to in
- pH range from 1 to 9

### Materials

- All metal components coated to protect against corrosion on model MG10
- All metal components stainless steel on model MG10S
- Gaskets are CAF (non-asbestos)
- Metal outer wrap

### Housing Selection

- Model 1MCM housings -non-code design for low flow rates
- SuperFlex™ AA housings -ASME Code design for high flow rates
- Model M housings -ASME Code design for high flow rates
- Model HF Housings

## BS Series Basket Strainers

BS Series filter housings use a Facet's stainless steel high efficiency basket strainer. A single pass of product through the system removes solids such as rust, dirt, scale, granules and other particles commonly found in liquid process streams.

Facet BS Series filter housings are available in several standard sizes to accommodate specific flow and filtration requirements. They are designed with no internal moving parts to provide easy service and reduced maintenance costs. Each housing is manufactured using quality materials and workmanship to give long-lasting, dependable service.

These housings are fitted with a cleanable basket made of stainless steel perforated plate with stainless steel mesh.

### Standard Design Features

- Body: Welded carbon steel construction, other materials available on request
- ASME Code, Section VIII construction, stamped and certified or "CE" marked
- Designed for 150 psi (10.5 kg/cm<sup>2</sup>) at 240°F (115°C); higher pressure and temperature ratings available on request
- Head closures: swing bolt closure
- Head gasket: Buna-N O-ring, other materials available on request
- Inlet and outlet permanently marked
- Exterior: Primer coated
- Interior: Epoxy coated
- Headlift furnished on 20" (508 mm) and larger

### Standard Connections

- Inlet and outlet: 150# RF (ANSI) flanged
- Side and bottom drain: 3000# NPT
- Vent and relief valve: 3/4" 3000# NPT
- Pressure gauge: 3/4" 3000# NPT

### Options

- Air eliminator
- Differential pressure gauge
- Pressure relief valve
- Manual drain valve
- Stainless steel wedge wire basket
- Thru bolts closure

## Fuel-Gard® VF-21SB/22SB Coalescer Separator

The Facet Fuel-Gard® VF-21SB/22SB , when configured as a coalescer separator, is an economical, compact housing designed to remove water and solids from aviation fuels.

Both interior and exterior surfaces of the carbon steel body are epoxy coated to protect against corrosion. This sturdy, single cartridge housing is easy to maintain and requires only 2" (51 mm) base clearance for cartridge change out.

### Standard Housing Design

- Carbon steel body
- Aluminum head
- Epoxy coated internally and externally
- 150 psi (10.5 kg/cm<sup>2</sup>) design pressure
- Swing bolt quick open closure
- Buna-N o-ring closure gasket
- Vent and drain connections w/ brass petcocks provided
- 1½" NPT inlet and outlet connections

### VESSEL OPTIONS

MODEL	DESCRIPTION
VF-21SB	Housing only
VF-21SB-PG	Housing w/ Direct Reading Differential Pressure Gauge
VF-21SB-PGS	Housing w/ Direct Reading Differential Pressure Gauge & Sight Glass
VF-21SB-PGWP	Housing w/ Direct Reading Differential Pressure Gauge & ¾" Coupling for Water Probe
VF-21SB-S	Housing w/ Sight Glass
VF-21SB-WP	Housing w/ ¾" Coupling for Water Probe
VF-22SB	Housing only
VF-22SB-PG	Housing w/ Direct Reading Differential Pressure Gauge
VF-22SB-PGS	Housing w/ Direct Reading Differential Pressure Gauge & Sight Glass
VF-22SB-PGWP	Housing w/ Direct Reading Differential Pressure Gauge & ¾" Coupling for Water Probe
VF-22SB-S	Housing w/ Sight Glass
VF-22SB-WP	Housing w/ ¾" Coupling for Water Probe
644160	Mounting Bracket
644964	Grounding Cable
606521	Closure O-Ring

**Differential Pressure Gauge-** The piston-type differential pressure gauge provides a simple visual warning. When 15 psi differential pressure is reached, the gauge indicator moves from green to red zone. This warning will prevent premature cartridge change-out.

**Water Sight Glass-** The water sight glass provides an easy means to detect water in the sump. The weighted ball, visible in the sight glass, will float only when water is present. The floating ball is an indication water should be drained from the housing to prevent both cartridge contamination and water traveling downstream from the housing.

## 21 Series Cartridges

### Standard Design Features

- Recommended maximum operating temperature: 180°F
- Maximum differential pressure: 75 psi (5.25 kg/cm<sup>2</sup>)
- pH range from 5 to 9
- Flow direction: Outside to in
- Cartridge dimensions: OD - 6" (152 mm), ID - 1 1/2" (38 mm), Nominal Length - 9" (229 mm)

### Materials

- Carbon steel structural components
- All metal components coated to protect against corrosion
- Standard gaskets are Buna-N —other materials available on request

## Bilge Water Separators with Ceramic Membrane CPS 3.2E + EMB

### High Design and Construction Technology

Experience, knowledge and innovation, united to develop a compact, small footprint and lightweight equipment fully driven by a PLC.

The presence of emulsified oil in the bilge water of the latest generation vessels caused IMO to issue the resolution MEPC.107(49), which requires that the resulting effluent after bilge water treatment must contain levels below 15 ppm of surfactants.

The treatment of this type of water using traditional bilge water separators has resulted ineffective in achieving these results, so in order to comply with this resolution, in Facet we have developed the bilge water separators with ceramic membrane.

The combination of this technology together with Facet MPak® coalescent plates has allowed that our Facet CPS 3.2E + EMB Separators meet the strict requirements of the aforementioned IMO regulation.

### Results

CPS 3.2E + EMB equipment eliminates hydrocarbons in two stages. In the first stage, the free hydrocarbon is separated from water through Facet coalescing plates, while in the second stage emulsions are broken by the ceramic membrane which removes emulsified hydrocarbon, reaching down an effluent with total hydrocarbon content of less than 5 ppm.

### Standard Design Features

- Flow rate homologated: 0.73 m<sup>3</sup>/h (3.2 USGPM)
- Supplied ready to be installed
- No moving components other than pumps and pneumatic valves.
- Fixed control level, without float
- Very low maintenance, consisting in occasional hosing cleaning of the plates, and membrane's hot self-cleaning process. No chemicals needed in both operations
- Water presence less than 5% in the separated oil, so it can be burned if required
- Separated oil discharge facilitated by pump
- Power supply 380/440V, 50 or 60 Hz

### Accessories

The equipment is supplied with the following accessories:

- Bilge alarm: as latest IMO MEPC. 107(49) resolution

### Approvals

Facet CPS 3.2E + EMB has been tested, approved and certified according to the requirements of IMO MEPC.107(49).

## Bilge Water Separators with Ceramic Membrane CPS-10B MKIII + EMB

### High Design and Construction Technology

Experience, knowledge and innovation, united to develop a compact, small footprint and lightweight equipment fully driven by a PLC.

The presence of emulsified oil in the bilge water of the latest generation vessels caused IMO to issue the resolution MEPC.107(49), which requires that the resulting effluent after bilge water treatment must contain levels below 15 ppm of surfactants.

The treatment of this type of water using traditional bilge water separators has resulted ineffective in achieving these results, so in order to comply with this resolution, in Facet we have developed the bilge water separators with ceramic membrane.

The combination of this technology together with Facet MPak® coalescent plates has allowed that our Facet CPS 10B MKIII + EMB Separators meet the strict requirements of the aforementioned IMO regulation.

### Results

CPS 10B MKIII + EMB equipment eliminates hydrocarbons in two stages. In the first stage, the free hydrocarbon is separated from water through Facet coalescing plates, while in the second stage emulsions are broken by the ceramic membrane which removes emulsified hydrocarbon, reaching down an effluent with total hydrocarbon content of less than 5 ppm.

### Standard Design Features

- Flow rate homologated: 2.5 m<sup>3</sup>/h (10 USGPM)
- Supplied ready to be installed
- No moving components other than pumps and pneumatic valves.
- Fixed control level, without float
- Very low maintenance, consisting in occasional hosing cleaning of the plates, and membrane's hot self-cleaning process. No chemicals needed in both operations
- Water presence less than 5% in the separated oil, so it can be burned if required
- Separated oil discharge facilitated by pump
- Power supply 380/440V, 50 or 60 Hz

### Accessories

The equipment is supplied with the following accessories:

- Bilge alarm: as latest IMO MEPC. 107(49) resolution
- Electric heater in the oil dome to facilitate heavy oil discharge (if required)

### Approvals

Facet CPS 10B MKIII + EMB has been tested, approved and certified according to the requirements of IMO MEPC.107(49).

## Bilge Water Separators with Disposal Membrane CPS 3.2E + EBM 14x1

**Small volume: 0.53 m<sup>3</sup> (18.7 cu.ft.).**  
**Low working weight: 412 Kgs.**  
**Great treatment capacity: 17.28 m<sup>3</sup>/day (4,565 usg/day).**  
**Cost effective.**  
**IMO MEPC 107(49) APPROVED.**

Facet CPS 3.2E + EBM 14x1 bilge water separator is a device compact, adaptable to the small spaces available on board, lightweight and low maintenance. Its operation is very easy and completely automatic, with all its functions controlled through a PLC.

The presence of emulsified oil in the bilge water of the latest generation vessels caused IMO to issue the resolution MEPC.107(49), which requires that the resulting effluent after bilge water treatment must contain levels below 15 ppm of surfactants.

This model combines the classic coalescing plates Facet MPak® with the disposal membranes which achieve a high efficiency in the breakdown of chemical and mechanical emulsions.

This combination allows that Facet CPS 3.2E + EBM 14x1 Separator meets the strict requirements of the aforementioned IMO regulation.

### Results

Facet CPS 3.2E + EBM 14x1 eliminates hydrocarbons in two stages. In the first stage, free hydrocarbon is separated from water through Facet coalescing plates, while in the second stage emulsions are broken by a membrane which removes emulsified hydrocarbon, reaching down an effluent with total hydrocarbon content of less than 5 ppm.

### Standard Design Features

- Flow rate homologated: 0.73 m<sup>3</sup>/h (3.2 USGPM)
- Supplied ready to be installed
- No moving components other than pumps and pneumatic valves.
- Fixed control level, without float
- Very low maintenance, consisting in occasional hosing cleaning of the plates, and membrane replacement. No chemicals needed in both operations
- Water presence less than 5% in the separated oil, so it can be burned if required
- Power supply 380/440V, 50 or 60 Hz

### Accessories

The equipment is supplied with the following accessories:

- Bilge alarm: as latest IMO MEPC. 107(49) resolution
- Electric heater in the oil dome to facilitate heavy oil discharge (if required)

### Approvals

Facet CPS 10B MKIII + EMB has been tested, approved and certified according to the requirements of IMO MEPC.107(49).

## Bilge Water Separators with Disposal Membrane CPS B MKIII + EBM 14x

Facet bilge water separator is a device compact, adaptable to the small spaces available on board, lightweight and low maintenance. Its operation is very easy and completely automatic, with all its functions controlled through a PLC.

The presence of emulsified oil in the bilge water of the latest generation vessels caused IMO to issue the resolution MEPC.107(49), which requires that the resulting effluent after bilge water treatment must contain levels below 15 ppm of surfactants.

This model combines the classic coalescing plates Facet MPak® with the disposal membranes which achieve a high efficiency in the breakdown of chemical and mechanical emulsions.

This combination allows that Facet CPS B MKIII + EBM 14x Separator meets the strict requirements of the aforementioned IMO regulation.

### Results

Facet CPS B MKIII + EBM 14x eliminates hydrocarbons in two stages. In the first stage, free hydrocarbon is separated from water through Facet coalescing plates, while in the second stage emulsions are broken by a membrane which removes emulsified hydrocarbon, reaching down an effluent with total hydrocarbon content of less than 5 ppm.

### Standard Design Features

- Flow rate range homologated: from 0.5 m³/h (2.2 USGPM) to 10 m³/h (44 usgpm)
- Supplied ready to be installed
- No moving components other than pumps and pneumatic valves.
- Fixed control level, without float
- Very low maintenance, consisting in occasional hosing cleaning of the plates, and membrane replacement. No chemicals needed in both operations
- Water presence less than 5% in the separated oil, so it can be burned if required
- Power supply 380/440V, 50 or 60 Hz

### Accessories

The equipment is supplied with the following accessories:

- Bilge alarm: as latest IMO MEPC. 107(49) resolution
- Electric heater in the oil dome to facilitate heavy oil discharge (if required)

### Approvals

Facet CPS B MKIII + EBM 14x bilge water separators have been tested, approved and certified according to the requirements of IMO MEPC.107(49).

## MAS Series Oil Water Separators for Offshore Applications

Facet Model MAS Oil Water Separators are designed to treat hydrocarbon water. These separators can be fed by gravity or pumped. These separators carry out separation by physical means, do not require consumables and have no mobile parts, therefore no maintenance is needed and its operation is free of failures.

These Plates are mounted in modular packs and provided with an adjust device against the vessel that secures that all the flow to be treated goes through the Plates. Optimal working range temperature of Plate Packs MPak® is 4 to 98 °C (40 to 208 °F). Each separator of the Model MAS can be equipped with adjustable skimmers to withdraw separated hydrocarbons. Optionally, they can also be provided with a storage chamber to accumulate separated hydrocarbons.

### Standard Features

- Access covers for easy adjustment of oil skimmers
- Epoxy coating interior and exterior
- MPak® plate packs: frame in steel and plastic hardware media is oleophilic polypropylene
- Clean plate packs in place -no need to remove from unit
- Solids collection connections built into all units
- ¾", ¼" or ½" MPak® coalescing plate spacing
- Computerized effluent predictions for accurate sizing
- Skid in carbon steel
- Safety closure device in the outlet

### Engineering Specifications

- Flanges: ANSI B16.5
- Material of construction: carbon steel
- Separator hydrostatically tested for ½ hour
- Welding in accordance with the latest edition of A.W.S.

### Standard Connections

- Inlet and outlet: 150# R.F.S.O.
- Solids cleanout: 150# R.F.S.O.
- Drain: 150# R.F.S.O.
- Heater: 2 ½" NPT coupling (heaters optional)

### Options

- Two adjustable oil skimmers
- Oil storage tank
- Oil pump control station: includes pump and motor, control panel, high and low level float switches
- Immersion heater: Available in various ratings
- Gasketed covers

## MAS Series Oil Water Separators for Offshore Applications

ITEM	DESCRIPTION
1	Inlet
2	Skimmer (optional)
3	Facet MPak®
4	Oil level probe (optional)
5	Automatic closure device
6	Outlet

## Portable Fuel Filtration and Pumping Unit for Helicopters and Light Aircrafts

Facet designs, manufactures and distributes a wide range of Jet Fuel Dispensing Cabinets, Supply Carts, Refueling Containers Systems for the marine market fully adaptable to the specific needs of each customer and in compliance with the most stringent specifications of the regulatory agencies.

The Facet portable filtration and pumping set is an economical, light and compact packaged unit for the supply of clean, dry fuel to helicopters and light aircraft.

The standard unit is fitted with a Facet VF 21/22-SB filter separator, differential pressure gauge and 12 volt or 24 volt electric pump for a maximum flow of 44 lpm (11.62 gpm). The unit is complete with intake and delivery hoses and comes with a lightweight antidrip nozzle.

The unit can be run from a 12 volt vehicle battery or from the helicopter's own power supply. A filter monitor can be fitted as an alternative to the standard filter water separator. Quality fuel accessories are available as options to improve and expand your transfer fuel systems for greater convenience and higher accuracies.

### Standard Design

- Facet Model VF 21/22-SB filter separator or monitor
- Differential pressure gauge piston type
- Ø19 mm (¾") adjustable plastic suction pipe assembly
- 13' (4 meter) fuel intake hose, with nipples for coupling to the pump and fuel intake filter
- 13' (4 meter) discharge hose, with nipples for coupling to the pump and antidripping nozzle
- High-flow automatic nozzle
- Electric pump, flow rate 44 lpm (11.62 gpm)
- On/Off switch
- Electric supply cable with nippers for connection to the power supply
- Ground connection cable
- Tubular type chassis for light weight and portability
- Approximate weight: 38 kgs (84 lbs)
- Chassis Dimensions: 450x500x510 mm (17¾"x19⅔"x20")

### Options

- Volumetric meter
- 230 VAC pump
- Hose reel

---

## V Series Lube Oil Conditioners

### Design and Construction

Facet Lube Oil Conditioners are built in carbon steel, epoxy painted and designed according to ASME VIII-I.

This equipment is specially designed to remove solids such as dirt, rust, sand and metallic particles wear, as well as lube oily water.

The equipment is made up by a separator filter, a pumping unit and heating unit (optional), all assembled in a skid.

The microfilter separator includes coalescer and separator cartridges with a double objective of retaining the finest particles and removal of water, to ensure a long life and high effectiveness thanks to their specific properties.

### Characteristics

The equipment has the following elements:

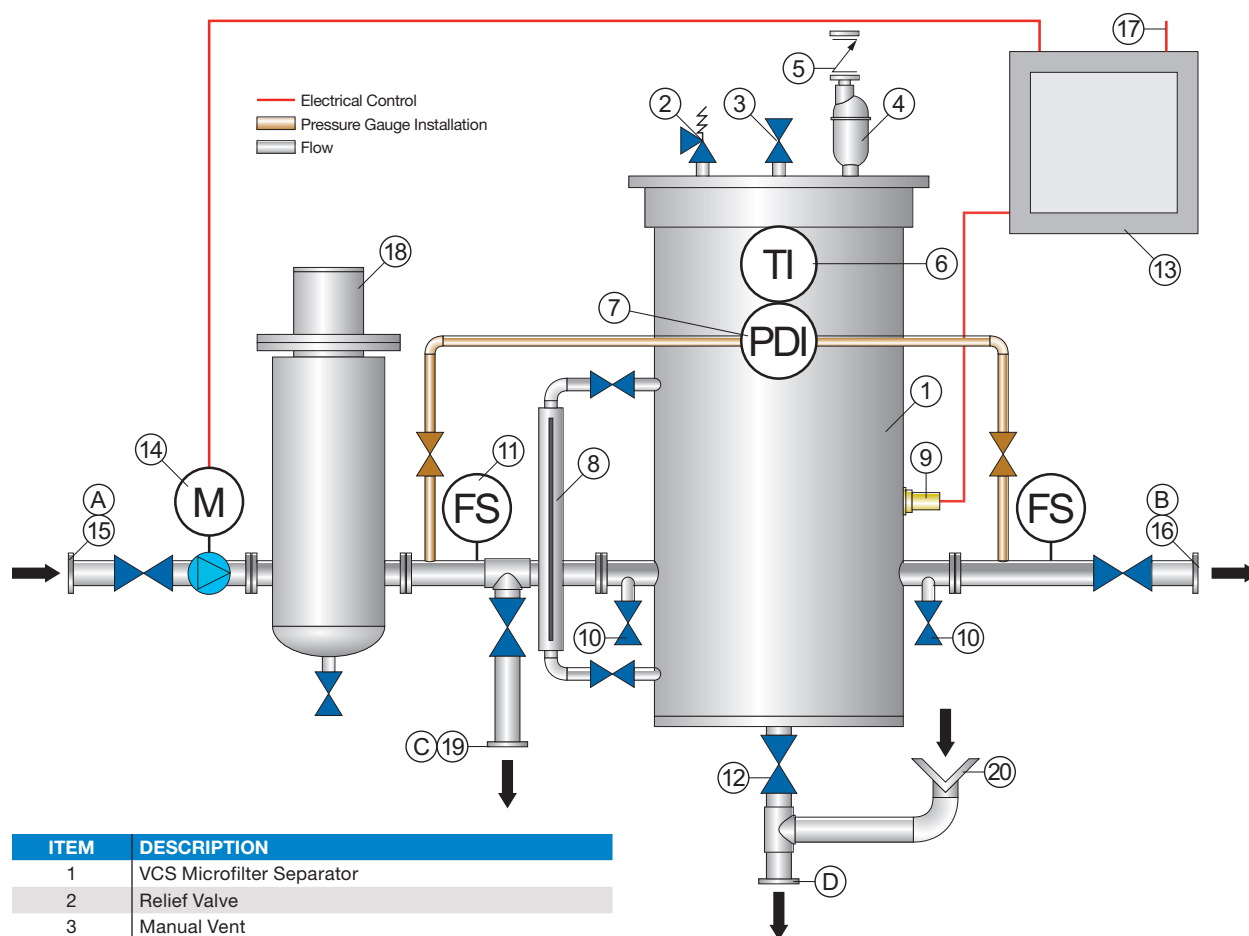

- Microfilter separator
- Pumping unit
- Heating (optional)
- Differential pressure gauge
- Level water gauge
- Automatic air eliminator
- Level prove to detect the presence of water
- Control panel

The control panel has the following visual alarms: high level of water in the microfilter separator, high differential pressure, general failure, high temperature alarm (optional)

### Results

- Removes, in continuous operation, solids and free water up to concentrations below 20 ppm
- Automatic operation, controlled by a PLC
- No flow inlet adjustment is required
- Its design ensures a safe service and free of leaks or discharges
- Their features make this equipment to have a low maintenance and to be easy to operate
- Each equipment is tested before its shipment to ensure optimum start-up and highest service rates

## V Series Lube Oil Conditioners

ITEM	DESCRIPTION
1	VCS Microfilter Separator
2	Relief Valve
3	Manual Vent
4	Air Eliminator
5	Check Valve
6	Temperature Indicator
7	Differential Pressure Gauge
8	Level Indicator
9	Level Probe
10	Inlet/Outlet Sample Probe
11	Flow Switch
12	Manual Drain Valve
13	Control Panel
14	Motor Pump
15	Inlet
16	Outlet
17	Electrical Line (customer supply)
18	Heater (optional)
19	Return to Tank Line
20	Drain

## JP-5 Fuel Treatment Systems

Facet designs, manufactures and distributes a wide range of JP-5 Fuel Treatment Systems for the marine market, tailored to the specific needs of customers and in compliance with the most stringent specifications of regulatory agencies.

As custom-made equipment, they can be configured as transfer units, service units, supply units, defueling units or combine various functions in one single unit.

These many adaptation capabilities allow to develop the right configuration according to the available space on board. Therefore, it is possible to install Facet JP-5 Fuel Treatment Systems in all kind of vessels, from small patrol boats to frigates, submarines or the largest aircraft carriers in the most important armies in the world.

---

## Turbo-Generator Fuel/Oil Modules

The Turbo-Generator Fuel/Oil Modules embrace the sum of Facet's know-how in microfiltration and separation, together with our experience in handling of fueling systems, providing fully automated pumping, filtration and conditioning of the fuel that is supplied to the turbo-generator.

Facet designs, manufactures and distributes a wide range of Turbo-Generator Fuel/Oil Modules for the marine market, tailored to the specific needs of customers and in compliance with the most stringent specifications of regulatory agencies.

The many adaptation capabilities allow to develop the right configuration according to the available space on board. Therefore, it is possible to install Facet Turbo-Generator Fuel/Oil Modules in all kind of vessels, from small patrol boats to frigates, submarines or the largest aircraft carriers in the most important armies in the world.

## STP Series Sewage Treatment Plants

Facet Sewage Treatment Plants STP Series for marine applications are designed for the treatment of black (from WC, urinals, and hospital) and grey (sinks, showers, laundry and galley) water generated on board.

The treatment consists of the purification and subsequent disinfection of the water to achieve an effluent whose quality meets the IMO requirements.

The purification mechanism is based on a biological process of active sludge with extended aeration: the microorganisms in the biomass purify the water, so that no additional chemical treatment throughout the process is necessary.

The plants are built in a single steel module to ease transportation and on board installation. The module is divided into three chambers (aeration, settling and discharge/disinfection), each of them with their respective inspection accesses.

In the aeration chamber are housed the air diffusers which provide the necessary oxygenation for the microorganisms and generate the agitation that homogenizes the content of the reactor. The settling chamber, pressurized to improve the process of deposition of solids, contains the biological filter and the sludge recirculation connections and greases toward the aeration chamber.

### Standard Features

- Meet IMO Resolutions MEPC-2(VI) and MEPC-159(55)
- Certified by the Maritime and Coastguard Agency and the CE
- No sludge generation
- No odour generation
- Fully automatic operation driven by PLC
- Inside and outside Epoxy protective coating
- Aeration system compounded by a blower, an air supply pipe, bubble diffusers, a filter and an air relief valve
- Automatic sludge recirculation system
- Access and inspection registers in every chamber
- Electrical control panel, with IP-55 protection, including operation synoptic panel

### Options

- Stand-by blower
- Stand-by discharge pump
- Chlorine solution dosing pump
- Grease trap
- Integrated vacuum system

## STP Series Sewage Treatment Plants

ITEM	DESCRIPTION
1	Aeration chamber
2	Sewage inlet
3	Chlorination chamber
4	Air diffusers
5	Clarification chamber
6	Clarification chamber bottom
7	Sludge return line
8	Sewage treatment unit air supply
9	Sludge return line air supply needle valve
10	Diffuser air supply valve
11	Clarifier inlet baffle pipe
12	Crossover manifold (from clarifier to chlorine chamber)
13	Chlorine chemical injection
14	Sludge return cleanout
15	Sludge return air supply solenoid valve
16	Anti-syphon vent
17	Control panel
18	Blower
19	Chlorine tank
20	Grey water inlet
21	Chlorine chemical injection
22	Treated liquid discharge from sewage treatment unit
23	Air vent atmosphere
24	To bilge
25	Unit overboard bypass
26	Bioreactor

## VTP Series Sewage Treatment Plants with Built-in Vacuum System

Facet Sewage Treatment Plants STP Series for marine applications are designed for the treatment of black (from WC, urinals, and hospital) and grey (sinks, showers, laundry and galley) water generated on board.

The treatment consists of the purification and subsequent disinfection of the water to achieve an effluent whose quality meets the IMO requirements.

The purification mechanism is based on a biological process of active sludge with extended aeration: the microorganisms in the biomass purify the water, so that no additional chemical treatment throughout the process is necessary.

The plants are built in a single steel module to ease transportation and on board installation. The module is divided into three chambers (aeration, settling and discharge/disinfection), each of them with their respective inspection accesses.

In the aeration chamber are housed the air diffusers which provide the necessary oxygenation for the microorganisms and generate the agitation that homogenizes the content of the reactor. The settling chamber, pressurized to improve the process of deposition of solids, contains the biological filter and the sludge recirculation connections and greases toward the aeration chamber.

Built-in vacuum system takes charge of transportation of black waters along the vacuum system to the treatment plant. The vacuum in the circuit is achieved automatically with the ejector and circulating pump.

### Standard Features

- Meet IMO Resolutions MEPC-2(VI) and MEPC-159(55)
- Certified by the Maritime and Coastguard Agency and the CE
- No sludge generation
- No odour generation
- Fully automatic operation driven by PLC
- Inside and outside Epoxy protective coating
- Aeration system compounded by blower, air supply pipe, bubble diffusers, filter and air relief valve
- Automatic sludge recirculation system
- Access and inspection registers in every chamber
- Electrical control panel, with IP-55 protection, including operation synoptic panel
- Vacuum ejectors
- Circulating pumps

### Options

- Stand-by blower
- Stand-by discharge pump
- Chlorine solution dosing pump
- Grease trap

## Sewage Treatment Plants with Built-in Vacuum System

ITEM	DESCRIPTION
1	Aeration chamber
2	Sewage inlet
3	Chlorine contact discharge chamber
4	Stainless steel non-clog air diffusers
5	Clarification chamber
6	Bottom of clarifier hopper
7	Sludge return line
8	Sewage treatment unit air supply
9	Sludge return line air supply needle valve
10	Diffuser air supply valve
11	Clarifier inlet baffle pipe
12	Crossover manifold (from clarifier to chlorine chamber)
13	Chlorine chemical injection
14	Sludge return cleanout
15	Sludge return air supply solenoid valve
16	Anti-syphon vent
17	Vacuum ejector
18	Vacuum manifold valves
19	Discharge valves
20	Circulation ejector pump
21	Vacuum control manifold
22	Air vent to atmosphere
23	Grey water inlet
24	Chlorine chemical injection
25	Treated liquid discharge from sewage treatment unit
26	Control panel
27	Blower
28	Sewage inlet pipe
29	Chlorine tank
30	To bilge
31	Bioreactor
