

Minimize Environmental Impact with CIF Series Filters

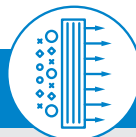

INNOVATIVE FILTRATION SOLUTIONS

Facet's CIF Series filters offer a more sustainable alternative to traditional microfilters by reducing waste and disposal costs. Their coreless, lightweight design significantly cuts down on freight and handling expenses, while maintaining high filtration efficiency for fuels and solvents.

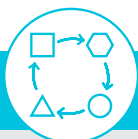

CORELESS DESIGN FOR REDUCED DISPOSAL

CIF filters can be crushed to 20% of their original size, reducing waste and disposal costs. They are also incinerable, providing a sustainable disposal option.

HIGH-EFFICIENCY FILTRATION

CIF filters remove solid contaminants from liquids such as gasoline, diesel, and jet fuel, with micron ratings from 0.5 to 75, ensuring reliable performance and long life.

COMPATIBILITY AND EASE OF USE

CIF filters, compatible with Facet M Series and other housings, are easy to install and available in various lengths, reducing labor and increasing efficiency.

COST-EFFECTIVE AND ECO-FRIENDLY

Switching to CIF filters lowers freight, disposal, and labor costs, with long-term environmental benefits. Users have recorded a 4-hour drop in filter changeout time.
